Introduction

The UT54ACS3G99S is Cobham Semiconductor Solutions' (formerly Aeroflex) Triple, Combinatorial, ManyGate Configurable Logic Gate with Schmitt Trigger inputs and Tri-State outputs. The output-enable pin /OEn is active LOW. The sixteen possible combinations of the four inputs An-Dn determine one of sixteen Yn output states when /OEn is LOW=VSS. The outputs Yn are disabled when /OEn is HIGH=VDD.

The ManyGate device logic functions are pin configurable by applying either a logic HIGH (VDD) or LOW (VSS) to the logic input pins as noted. Three identical, independently configurable combinatorial logic blocks are included in the UT54ACS3G99S, as shown in the logic diagram of Figure 1. The nine basic Boolean logic functions in each logic block are listed here as follows: AND, NAND, OR, NOR, XOR, XNOR, MUX, inverter, and buffer. All sixteen logic functions are described in Tables 2-9.

The UT54ACS3G99S triple, configurable, combinatorial logic gate is available in a small form factor, 20-lead ceramic flatpack and operates on a power supply range of 3.0V to 5.5V.
